<u>Listing of Claims</u>:

Claims 1-10 (Canceled).

11. (Currently Amended) A network printing system
comprising a terminal device, a server, and a printing machine
that are connected to each other via a network,

wherein the printing machine comprises:

5   an e-mail address acquiring unit which acquires an
e-mail address of said terminal device;

an address generating unit which generates a temporary
address <u>indicating a storage area</u> of said server<u>, said storage
area being reserved to temporarily store image data which has not
10   yet been received by the server</u>;

an e-mail transmitter which transmits an e-mail, which
includes the temporary address generated by said address
generating unit, to the e-mail address acquired by said e-mail
address acquiring unit;

15   a determiner which determines whether image data has
been transmitted by said terminal device to be stored at the
<u>storage area designated by the</u> temporary address<u>;</u> ~~designated by
the e-mail transmitted by said e-mail transmitter;~~

a receiver which accesses said server and designates
20   the temporary address to receive image data transmitted by said

server in response to the access, if said determiner determines

that the image data has been transmitted by said terminal device

to be stored at the <u>storage area designated by the</u> temporary

address; and

25   a printing unit which prints the image data received by

said receiver;

        wherein the terminal device comprises:

                an image capturing unit which captures images of

subjects and generates image data representing the captured

30   images;

                an e-mail receiver which receives the e-mail including

the temporary address ~~of said server~~, from said printing machine;

and

                a transmitter which accesses the temporary address

35   <u>indicating the storage area</u> of said server included in the e-mail

received by said e-mail receiver, and which transmits image data

generated by said image capturing unit to said server; and

        wherein said server comprises:

                an image receiver which receives the image data

40   transmitted from said terminal device that has accessed the

temporary address ~~of said server~~;

                a storage unit which stores the image data received by

said image receiver at <u>the storage area designated by</u> the

temporary address; and

45   an image transmitter which transmits designated image

data stored at <u>the storage area designated by</u> the temporary

address in said storage unit, to said printing machine in

response to the access by said printing machine designating the

temporary address.

      12.   (Previously Presented) The network printing system

according to claim 11, wherein said terminal device further

comprises:

      a memory unit which sequentially stores the image data

5   generated by said image capturing unit; and

      an image retriever which retrieves image data corresponding

to an arbitrary date of capturing, from said memory unit,

      wherein the e-mail from said printing machine which is

received by said e-mail receiver includes date information

10   representing a designated date,

      wherein said image retriever retrieves the image data from

said memory unit in accordance with the date information included

in the e-mail received by said e-mail receiver, and

      wherein said transmitter transmits the image data retrieved

15   by said image retriever to said server.

      13.   (Previously Presented) The network printing system

according to claim 11, wherein said terminal device further

comprises a memory unit which stores DPOF information which

designates at least image data to be printed, while sequentially

5   storing the image data generated by said image capturing unit,

and

        wherein in response to the e-mail from the printing machine

received by the e-mail receiver, said transmitter transmits the

image data designated by the DPOF information stored in said

10   memory unit to said server.

        14.   (Currently Amended) A network printing system

comprising a terminal device, a server, and a printing machine

that are connected to each other via a network,

        wherein said printing machine acquires an e-mail address of

5   said terminal device, generates a temporary address indicating a

storage area of said server, said storage area being reserved to

temporarily store image data which has not yet been received by

the server, and transmits an email including the generated

temporary address of said server to the e-mail address of said

10   terminal device;

        wherein said terminal device accesses the temporary address

indicating the storage area of said server that is included in

the e-mail transmitted by said printing machine, and transmits

image data representing a captured subject to said server;

15   wherein said server stores the image data transmitted from

said terminal device at <u>the storage area designed by</u> the

temporary address, and transmits designated image data that

is stored at the <u>storage area designated by the</u> temporary address

to said printing machine, in response to said printing machine

20   accessing said server and designating the temporary address; and

wherein said printing machine determines whether the image

data has been transmitted by said terminal device to be stored at

the <u>storage area designated by the</u> temporary address ~~of said~~

~~server~~, accesses said server and designates the temporary address

25   when it is determined that the image data has been transmitted by

said terminal device to be stored at the <u>storage area designated</u>

<u>by the</u> temporary address, receives the image data transmitted

from said server in response to the access by said printing

machine, and prints the received image data.

15.   (Currently Amended) A server that is connected to

a terminal device and a printing machine via a network, the

server comprising:

an image receiver which receives image data transmitted by

5   said terminal device when said terminal device accesses said

server and designates a temporary address <u>indicating a storage</u>

<u>area</u> of said server<u>, said storage area being reserved to</u>

temporarily store image data which has not yet been received by

the server;

10   a storage unit which stores, at the storage area designated

by the temporary address, the image data received by said image

receiver; and

          an image transmitter which transmits designated image data

that is stored at the storage area designated by the temporary

15   address in said storage unit to said printing machine so as to

print the designated image data, in response to the printing

machine accessing said terminal device and designating the

temporary address.

          16.   (Currently Amended) A printing machine that is

connected to a terminal device and a server via a network, the

printing machine comprising:

          an e-mail address acquiring unit which acquires an e-mail

 5   address of said terminal device;

          an address generating unit which generates a temporary

address indicating a storage area of said server, said storage

area being reserved to temporarily store image data which has not

yet been received by the server;

10   an e-mail transmitter which transmits an e-mail, which

includes the temporary address generated by said address

generating unit, to the e-mail address acquired by said e-mail

address acquiring unit;

a determiner which determines whether image data has

15   been transmitted by said terminal device to be stored at <u>the</u>

<u>storage area designated by</u> the temporary address ~~of said server~~;

a receiver which accesses said server and designates the

temporary address to receive image data transmitted by said

server in response to the access, when said determiner determines

20   that the image data has been transmitted by said terminal device

to be stored at <u>the storage area designated by</u> the temporary

address; and

a printing unit which prints the image data received by said

receiver.

Claim 17 (Canceled).

18.   (Currently Amended) A printing method for a system

including a terminal device, a server, and a printing machine

that are connected to each other via a network, the

method comprising:

5   acquiring an e-mail address of said terminal device, by said

printing machine;

generating a temporary address <u>indicating a storage area</u> of

said server, by said printing machine<u>, said storage area being</u>

<u>reserved to temporarily store image data which has not yet been</u>

10   <u>received by the server</u>;

transmitting an e-mail from said printing machine to said

acquired e-mail address of said terminal device, said e-mail

including the temporary address ~~of said server~~;

receiving the e-mail including the temporary address ~~of said~~

15   ~~server~~, by said terminal device;

accessing said server and designating said temporary address

included in the received e-mail, by said terminal device;

transferring image data captured by said terminal device

from said terminal device to said server;

20   storing the transferred image data at <u>the storage area of</u>

<u>said server designated by</u> the temporary address ~~of said server~~;

transferring designated image data, which is stored at the

<u>storage area designated by the</u> temporary address ~~of said server~~,

from said server to said printing machine, in response to said

25   printing machine accessing said server and designating said

temporary address; and

printing the image data transferred to said printing

machine, by said printing machine.

Claim 19 (Canceled).

-9-

20.   (Currently Amended) A printing method for a printing machine that is connected to a terminal device and a server via a network, the method comprising:

acquiring an e-mail address of said terminal device;

5   generating a temporary address <u>indicating a storage area</u> of said server<u>, said storage area being reserved to temporarily store image data which has not yet been received by the server</u>;

transmitting an e-mail including the temporary address ~~of said server~~ to the acquired e-mail address of said terminal

10   device;

determining whether image data has been transferred from said terminal device to said server to be stored at <u>the storage area designated by</u> the temporary address included in the e-mail;

accessing said server and designating the temporary address

15   if it is determined that the image data has been transferred from said terminal device to be stored at <u>the storage area designated by</u> the temporary address ~~of said server~~, to receive image data transferred from said server in response to the access; and

printing the received image data.
